Keep up with RITlug outside of meetings:

ritlug.com/get-involved, rit-lug.slack.com

ubuntu

archlinux

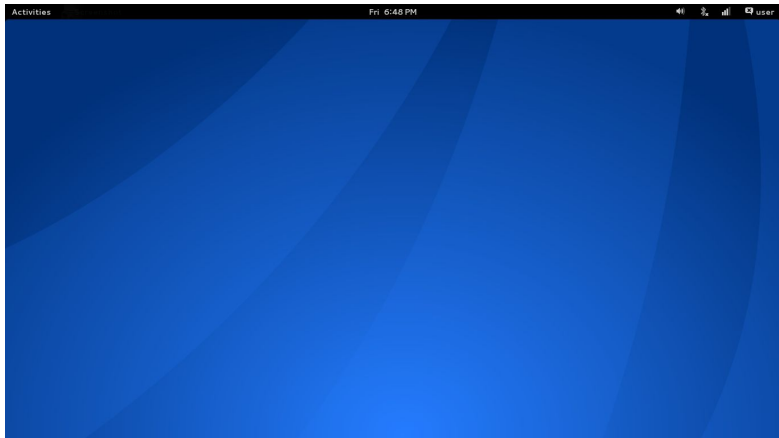

TigerOS

- RIT's own Linux Distro!!!
- An actively developed Fedora Remix (Fedora 30)
- Designed to meet the needs of RIT students, regardless of major or department
- Post install script installs packages for you depending on major
- If you are interested in working on it, talk to Tim
- Link: <https://ritlug.com/tigeros>

Antergos

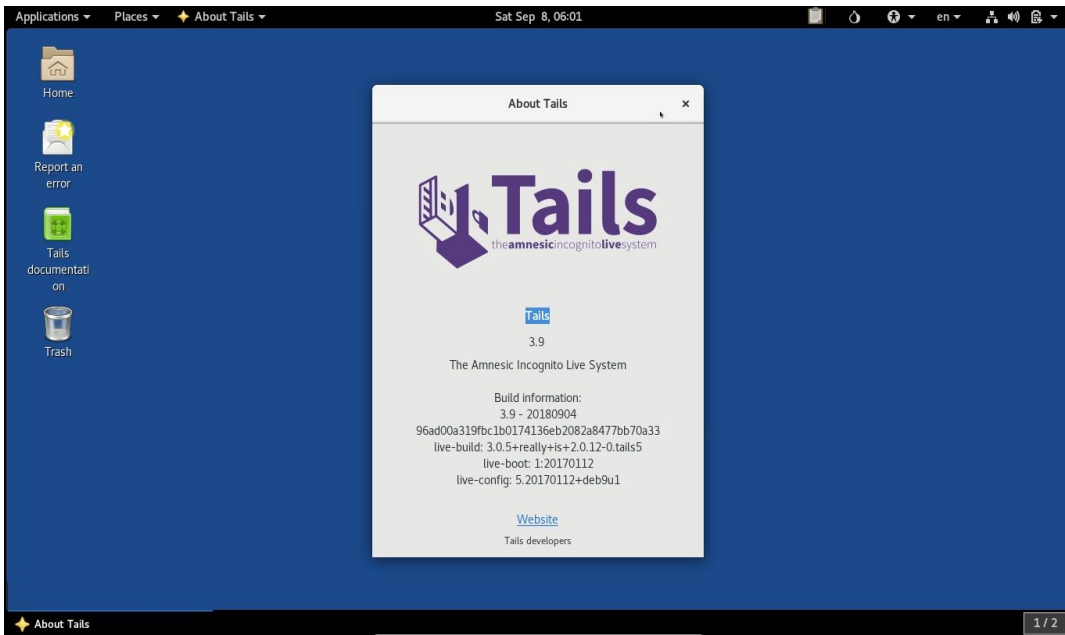

- An attempt to make Arch “friendly” (manjaro style)
- Initially called “Cinnarch”
- Partnered with the Numix Project, to add some variety to its DE and overall design
- Development ended on April 8th, 2019
 - Devs, all volunteers, didn’t have the time/resources to keep up the project
- Current installs will eventually become essentially standard Arch installs
- Link:
<https://web.archive.org/web/20190903082315/https://antergos.com/>

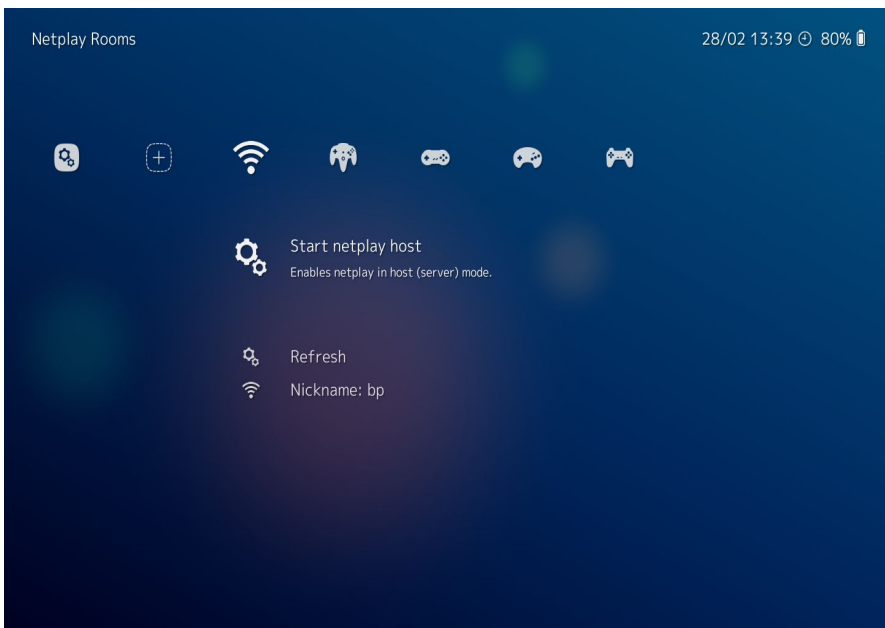

TailsOS (the amnesic incognito livesystem)

- Based on Debian
- Runs only from a bootable USB
- Security focused distro
- All networking features are run and operated through Tor (the onion router)
- Designed for use by those living in places with heavy censorship laws, or are just really paranoid
- Link: <https://tails.boum.org/index.en.html>

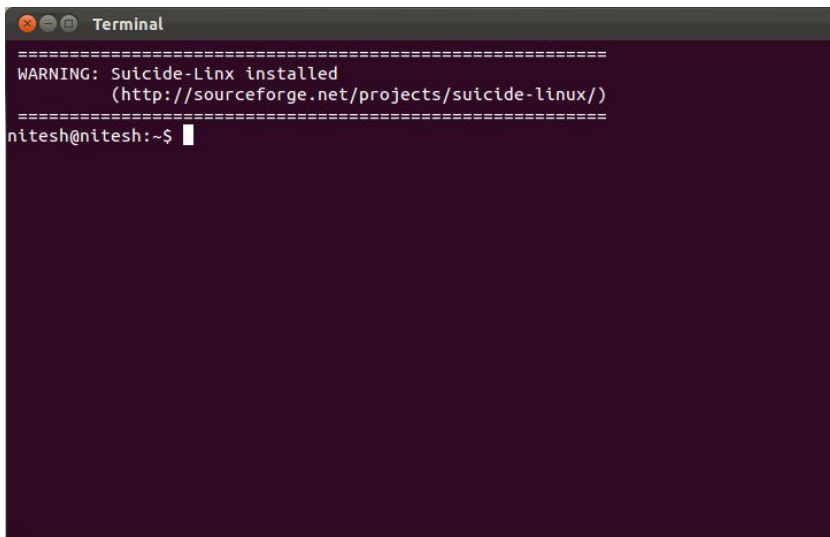

Lakka

- Turns your Raspberry Pi into a game console.
- Can run games for: Nintendo 64, Atari, Wii, PSP, PS2/3, Xbox 360, Super Nintendo
- Optimizes native Linux games
- Emulators Included:
 - Dolphin
 - RetroArch
 - PCSX2
 - Xenia (with Wine)
- Link: <http://www.lakka.tv/>

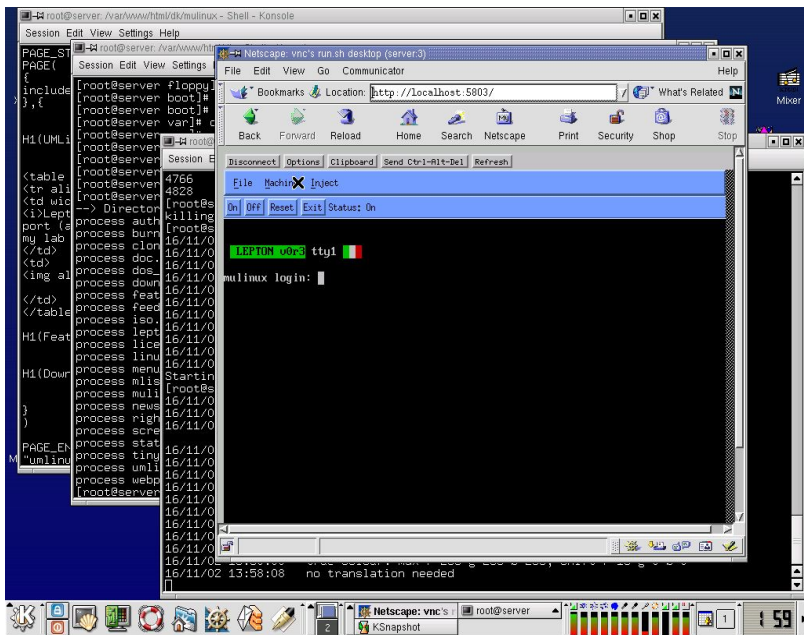

Suicide Linux

```
Terminal
=====
WARNING: Suicide-Linux installed
        (http://sourceforge.net/projects/suicide-linux/)
=====
nitesh@nitesh:~$
```

- Technically a Debian Package, but available in an .iso and as a Docker image
 - EVERYTHING in root by default
 - At total random, you may experience a sudden case of “sudo rm -rf /”
 - Link: <https://qntm.org/suicide>
-

Linux muLinux

- Based on minimalism, and the idea of running “modern software on ancient hardware”
- Last Release: February 10, 2004
- Minimal System Requirements:
 - 4 Mb of RAM
 - 20 Mb of Hard Drive Space (for full install)
- ALL packages are optional on install
- Link: <http://micheleandreoli.org/public/Software/mulinux/>

Red Star OS

- The official operating system of North Korea (The Democratic People's Republic of Korea)
- Based on Fedora 12
- Available in versions 1.0, 2.0, 3.0, and 4.0
- Entire operating system is “essentially malware”
- Includes “modified” versions of:
 - Firefox - “Naenara”
 - Wine
 - VLC
- DPRK Networking - “Kwangmyong”
- Link: <https://archive.org/redstar/>

Hannah Montana Linux

- Based off of Kubuntu
- Uses the KDE desktop environment
- Designed and intended to: “help children gain an interest in Linux and computing”
- [Has its own song](http://hannahmontana.sourceforge.net/index.html)
- Is a meme
- Link:
<http://hannahmontana.sourceforge.net/index.html>

Biebian (Justin Bieber Linux)

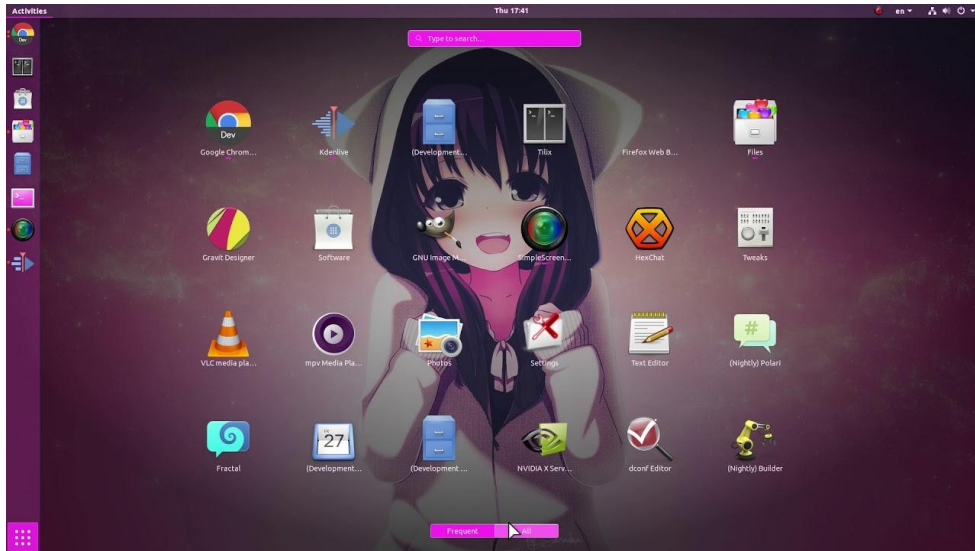

- Actually based on Puppy Lucid 525 Linux, the name is a joke
 - Like HML, designed and aimed at “helping children gain an interest in Linux and computing”
 - Inspired by HML
 - Comes with “legally copied” MP3 files of Justin Bieber’s music
 - Is also a meme
 - Link: <http://biebian.sourceforge.net/>
-

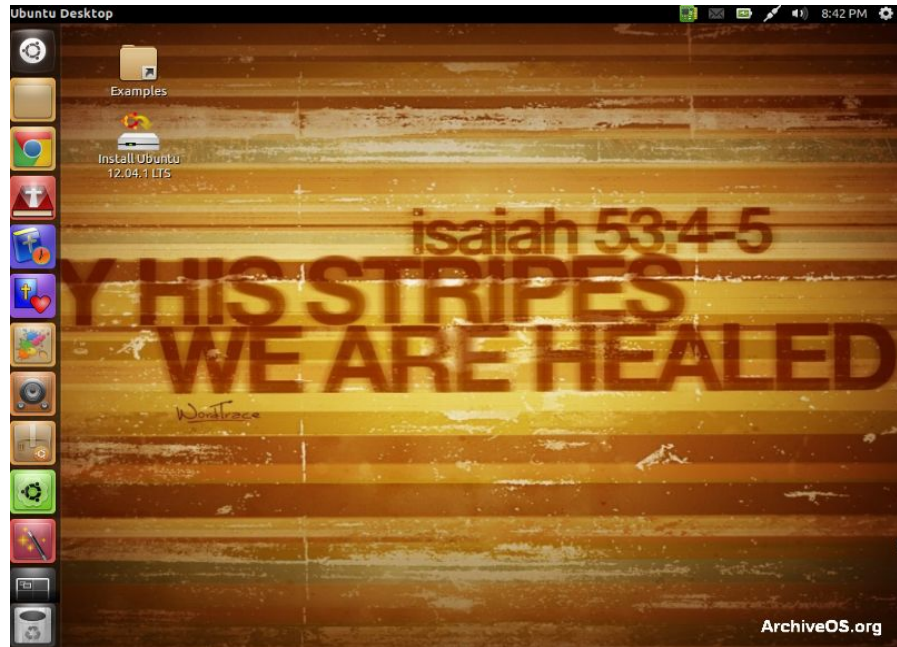

moebuntu (Anime Linux)

- Based on Ubuntu, still maintained
- Default language is Japanese
- Includes several dozen packages related or themed after anime/manga
- Link: http://moebuntu.web.fc2.com/home_eng.html

Ubuntu Christian Edition

- Based on Ubuntu 14.04
- Comes installed with free Bible study tools, as well as pdf copies of different versions of the Bible
- Highly customizable and configurable parental controls
- Link: <https://ubuntuce.com/>

Ubuntu Satanic Edition

- Based on Ubuntu, still maintained
 - Version numbers are labelled as 666.xx
 - Comes with a bunch of free heavy metal music
 - There is no light theme mode, only dark theme
 - Link: <https://ubuntusatanic.org/about>
-

“Honorable Mention”: TempleOS

- “Computing as God intended!”
- Created entirely by Terry Davis, in his own language, “HolyC”
- No networking drivers or features
- Supports 16 colors!
- Written from over 100,000 lines of code, written by one man
- Link: <https://templeos.org/>
